

# USE OF PHANTOMS AND IMAGE DATASETS FOR REGULATORY DECISION MAKING

**Nicholas Petrick. Ph.D.**

Division of Imaging, Diagnostics and Software Reliability (DIDSR)  
Office of Science and Engineering Labs  
Center for Devices and Radiological Health (CDRH)  
U.S. Food and Drug Administration (FDA)  
[nicholas.petrick@fda.hhs.gov](mailto:nicholas.petrick@fda.hhs.gov)

# DISCLOSURES

- No conflicts to disclose

# OUTLINE

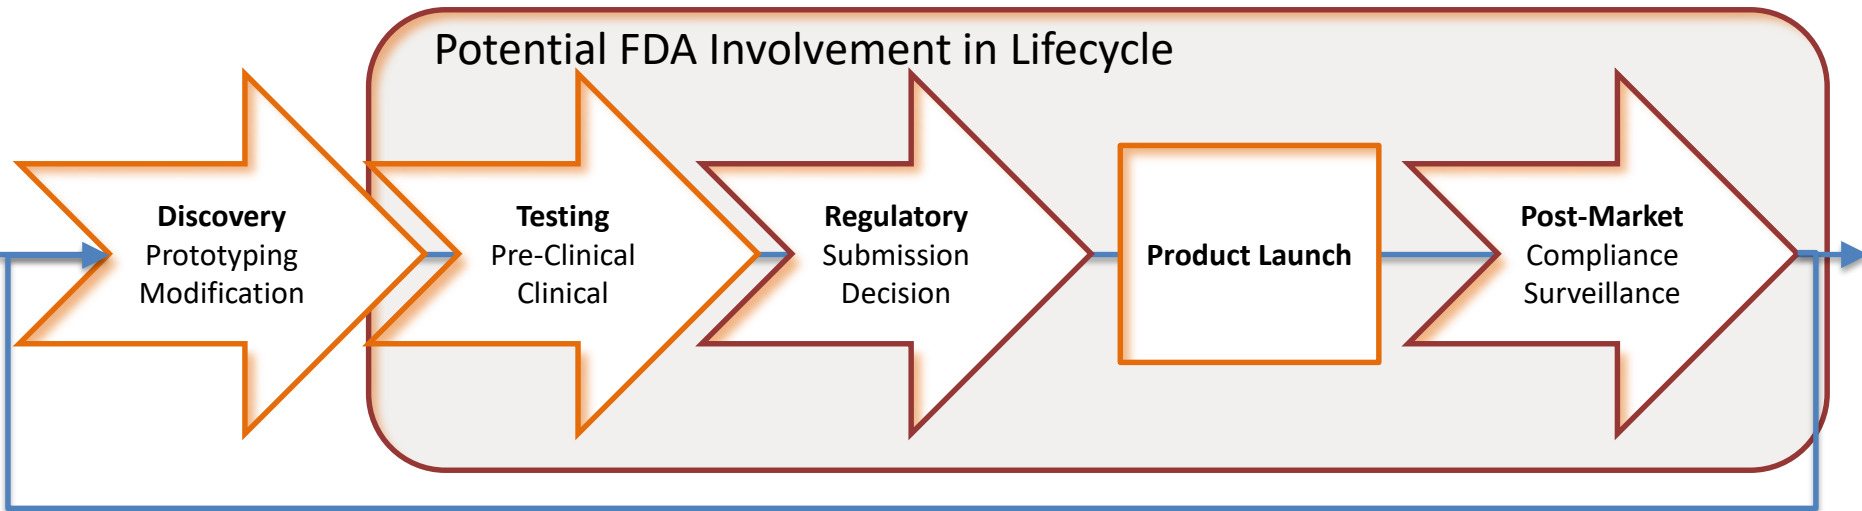

- Overview of medical device regulatory framework
- Software as a medical device (SaMD)
- Medical device development tools (MDDTs)
  - Phantoms and datasets as potential MDDT candidates

## CENTER FOR DEVICES AND RADIOLOGICAL HEALTH

- Protect and promote the health of the public by ensuring the **safety** and **effectiveness** of medical devices and the safety of radiation-emitting electronic products

# DEVELOPMENT PATHWAY

- FDA strives to speed translation of innovative, safe, and effective products to market throughout product lifecycle

# DEVICE CLASS & PRE-MARKET REQUIREMENTS

<b>Device Class</b>	<b>Controls</b>	<b>Premarket Review Process</b>
<b>Class I</b> (lowest risk)	<b>General Controls</b>	<b>Most are exempt</b>
<b>Class II</b>	<b>General Controls</b> <b>Special Controls</b>	<b>Premarket Notification [510(k)] or De Novo</b>
<b>Class III</b> (highest risk)	<b>General Controls</b> <b>Premarket Approval</b>	<b>Premarket Approval [PMA]</b>

# MEDICAL DEVICES BY CLASS

**Class I**  
*Lower risk*

**Class II**  
CT, MR, US imaging systems  
Most imaging CAde/CADx  
Some IVD tests

**Class III**  
*Higher risk*  
Novel Imaging systems (DBT)  
Leadless Pacemakers  
Bronchial Thermoplasty Systems  
Some IVD Tests

# GENERAL/SPECIAL CONTROLS

- General Controls
  - General controls apply to all medical devices, unless exempted by regulations
    - Registration and device listing
    - Good manufacturing practice requirements
    - Adverse event reporting
    - ...
- Special Controls
  - Controls beyond general controls necessary to establish a reasonable assurance of the safety & effectiveness. Special controls are usually device-specific
    - Special labeling requirements
    - Premarket data requirements
    - Postmarket surveillance
    - ...

<http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/Overview/GeneralandSpecialControls/ucm055910.htm>

# HOW DEVICES COME TO MARKET IN U.S.

- 510(k)
  - Demonstrate substantial equivalence to predicate device
- De Novo
  - Risk-based classification for novel medical devices for which general controls, or general and special controls, provide reasonable assurance of safety and effectiveness for the intended use, but for which there is no legally marketed predicate. Devices granted through De Novo may be marketed/used as predicates for future 510(k) submissions
- PMA
  - Demonstrate reasonable assurance of safety and effectiveness
  - Most Class III devices
- Pre-submissions (Qsubs)
  - Informal interaction with FDA (usually non-binding) prior to device submission
    - Answer questions about a specific device under development

## SOFTWARE AS A MEDICAL DEVICE (SAMd)

# REGULATION OF SaMD

- IMDRF Working Group (WG) on Software as a Medical Device (SaMD)
  - SaMD: Software intended to be used for medical purposes without being part of a hardware medical device
    - Include machine learning (ML) algorithms for disease diagnosis & monitoring
      - Including lung cancer quantitative imaging (QI) and computer-aided diagnosis (CAD) tools
  - Outputs:
    - SaMD: Key Definitions
    - SaMD: Possible Framework for Risk Categorization and Corresponding Considerations
    - SaMD: Application of Quality Management System
    - SaMD: Clinical Evaluation

<http://www.imdrf.org/workitems/wi-samd.asp>

**IMDRF** International Medical  
Device Regulators Forum

# IMDRF AND FDA GUIDANCE

- **SAMD: Clinical Evaluation**
  - Adopted as FDA guidance in 2017
  - FDA intends to consider principles of the IMDRF report in evolving approach to AI/ML and SaMD review

**Software as a Medical Device (SAMD):  
Clinical Evaluation**

---

**Guidance for Industry and  
Food and Drug Administration Staff**

Document issued on December 8, 2017.

The draft of this document was issued on October 14, 2016.

For questions about this document, contact the Office of the Center Director at 301-796-6900 or the Digital Health Program at [digitalhealth@fda.hhs.gov](mailto:digitalhealth@fda.hhs.gov).

# SAMD: CLINICAL EVALUATION

Clinical Evaluation		
Valid Clinical Association	Analytical Validation	Clinical Validation
Is there a valid clinical association between your SaMD output and your SaMD's targeted clinical condition?	Does your SaMD correctly process input data to generate accurate, reliable, and precise output data?	Does use of your SaMD's accurate, reliable, and precise output data achieve your intended purpose in your target population in the context of clinical care?

- 
- Evidence generation
    - Literature
    - Professional guidelines
    - Secondary data analysis
    - Clinical trials/studies

# SAMD: CLINICAL EVALUATION

Clinical Evaluation		
Valid Clinical Association	Analytical Validation	Clinical Validation
Is there a valid clinical association between your SaMD output and your SaMD's targeted clinical condition?	Does your SaMD correctly process input data to generate accurate, reliable, and precise output data?	Does use of your SaMD's accurate, reliable, and precise output data achieve your intended purpose in your target population in the context of clinical care?

- SaMD meet technical requirements
  - Provide evidence that software correctly constructed
  - Demonstrate it meets specifications and conforms to user needs

# SAMD: CLINICAL EVALUATION

Clinical Evaluation		
Valid Clinical Association	Analytical Validation	Clinical Validation
Is there a valid clinical association between your SaMD output and your SaMD's targeted clinical condition?	Does your SaMD correctly process input data to generate accurate, reliable, and precise output data?	Does use of your SaMD's accurate, reliable, and precise output data achieve your intended purpose in your target population in the context of clinical care?

- Evidence that shows
  - SaMD has been tested in target population and for intended use
  - Users can achieve clinically meaningful outcomes

# RISK-BASED REGULATORY APPROACH

## MEDICAL DEVICE DEVELOPMENT TOOL (MDDT)

# WHAT IS AN MDDT?

- **Medical Device Development Tool (MDDT)** is a method, material, or measurement used to assess effectiveness, safety, or performance of a medical device
  - MDDT Categories
    - Clinical Outcome Assessment (COA), Biomarker Test (BT), Nonclinical Assessment Model (NAM)
  - A MDDT is scientifically validated and qualified for a specific **Context Of Use (COU)** on the way the MDDT should be used
  - Qualification is a FDA conclusion that within the COU a MDDT has a specific interpretation and application in medical device development and regulatory review

Website:

<http://www.fda.gov/MedicalDevices/ScienceandResearch/MedicalDeviceDevelopmentToolsMDDT/default.htm>

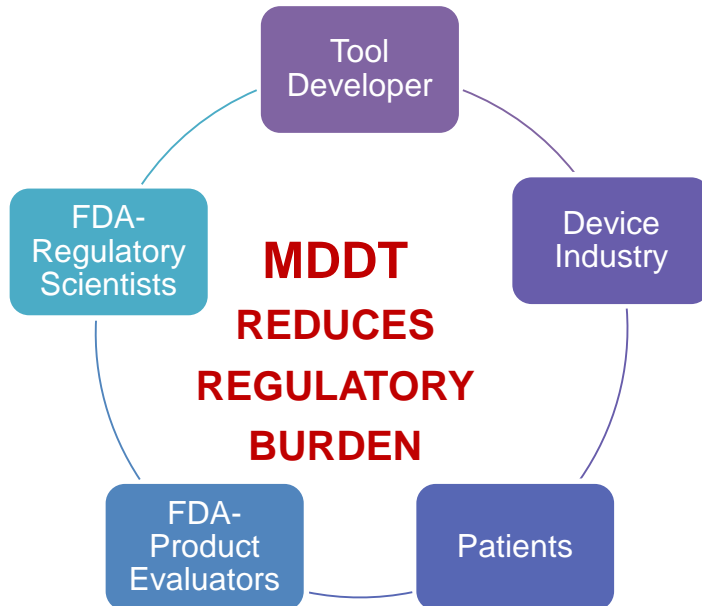

Questions? email: [MDDT@fda.hhs.gov](mailto:MDDT@fda.hhs.gov)

# Medical Device Development Tool Program

Research  Development

***Promotes Efficient Medical Device Development***

## ***Benefit of Qualifying Tools***

- Fosters innovation
- Encourages collaboration by engaging broader community
  - Not necessarily just device developers
- Reduces resource expenditure
- Qualified MDDT applied in multiple device submissions
- Promotes efficiency in CDRH regulatory review resources
- Minimizes uncertainty in regulatory review process

# CDER'S DRUG DEVELOPMENT TOOLS

- **Drug Development Tool (DDT)** is a method, material, or measure that can potentially facilitate drug development
  - **Mission**
    - To qualify and make DDTs publicly available for a specific context of use to expedite drug development and review of regulatory applications
  - FDA established qualification programs to support DDT development
    - **DDT Qualification Programs**
      - Animal Model Qualification Program
      - Biomarker Qualification Program
      - Clinical Outcome Assessments (COA) Qualification Program

<https://www.fda.gov/drugs/developmentapprovalprocess/drugdevelopmenttoolsqualificationprogram/>

# QUALIFIED MDDTs

Name of Tool	Summary of Evidence	Product Area(s)	Tool Type	Date Qualified
Minnesota Living with Heart Failure Questionnaire (MLHFQ)	<a href="#">MLHFQ Qualification Summary</a>	Cardio	COA	03/19/2018
Kansas City Cardiomyopathy Questionnaire (KCCQ)	<a href="#">KCCQ Qualification Summary</a>	Cardio	COA	10/19/2017

# EXAMPLE OF A POTENTIAL MDDT

- eeDAP: Evaluation environment for digital and analog pathology
  - System for registering glass slide with digital whole slide image (WSI)
  - Allow pathologist to evaluate same FOV on analog microscope and WSI
    - Eliminate location variability for faster & more precise comparisons of technologies

# CDRH QUALIFICATION DECISION FRAMEWORK

- Consideration for qualifying a proposed MDDT
  - MDDT description
  - Context of use
  - Public Health Impact
  - Strength of evidence
    - Does scientific evidence demonstrate that MDDT reliably and accurately measures what is intended, is scientifically plausible, and is reasonably likely to predict the outcome of interest?
  - Assessment of advantages and disadvantages
    - Within specified context of use and given the available strength of evidence, do the advantages outweigh potential disadvantages of making decisions based on measurements obtained using the MDDT
    - Of particular importance are regulatory, public health, and/or clinical impact.

## POTENTIAL MDDTs: CT PHANTOMS

# QUANTITATIVE IMAGING

- CT lesion volume as a quantitative measure of actual tumor size in vivo
  - Anthropomorphic lung phantom
  - Accumetra phantom

# KYOTOKAGAKU/FDA LUNG PHANTOM

- QI tool technical assessment to support a QI lesion volume tool claim
  - Statistical measures of tool volumetry accuracy
  - Currently used in QIBA advance disease volumetry profile conformance testing

# ACCUMETRA IQ PHANTOM

Children's hospital

NIH

CTLX1 phantom scan

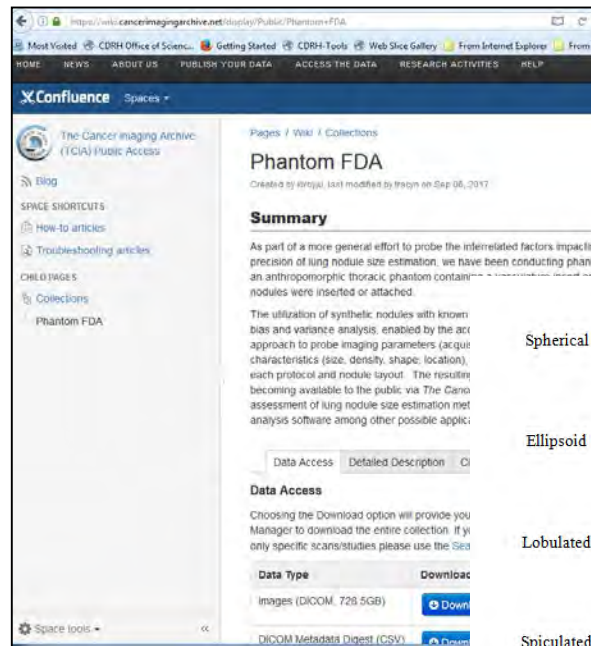

- Potential context of use
  - Image quality assessment of CT system for lung cancer screening

# POTENTIAL MDDTs: CT DATASETS

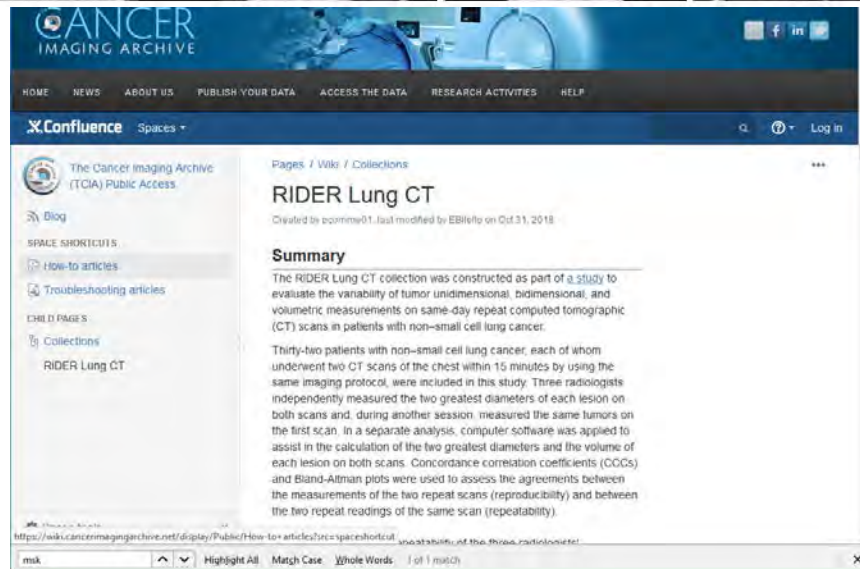

# PHANTOM CT SCANS

- Technical assessment to support QI lesion volume tool claim
  - Accuracy assessment
    - Linearity/bias
  - Currently used in QIBA advance disease conformance testing

# RIDER COFFEE-BREAK CT SCANS

- Technical assessment to support a QI lesion volume tool claim
  - Precision assessment
    - Repeatability
    - Reproducibility
  - Currently used in QIBA advance disease conformance testing

## RIDER Lung CT

Created by ecomine01, last modified by EBHfelp on Oct 31, 2018

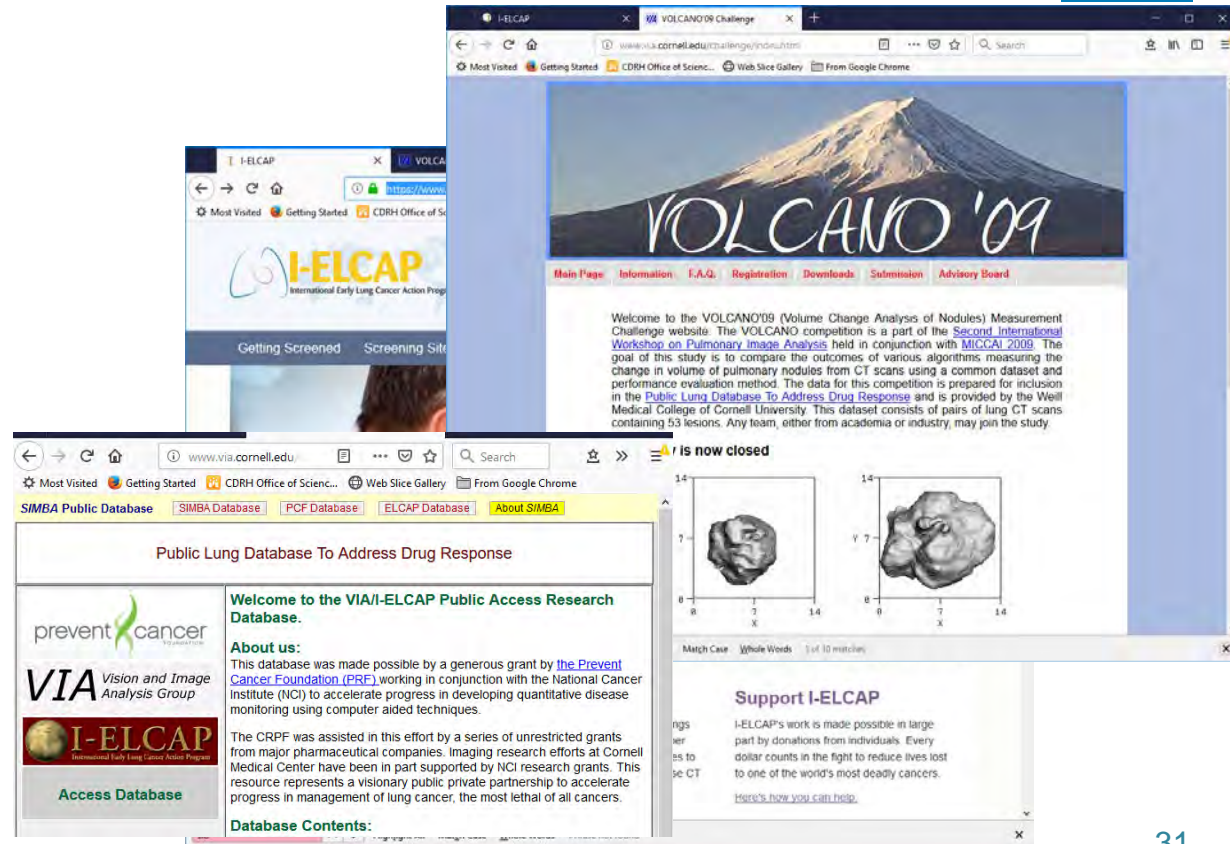

### Summary

The RIDER Lung CT collection was constructed as part of a study to evaluate the variability of tumor unidimensional, bidimensional, and volumetric measurements on same-day repeat computed tomographic (CT) scans in patients with non-small cell lung cancer.

Thirty-two patients with non-small cell lung cancer, each of whom underwent two CT scans of the chest within 15 minutes by using the same imaging protocol, were included in this study. Three radiologists independently measured the two greatest diameters of each lesion on both scans and, during another session, measured the same tumors on the first scan. In a separate analysis, computer software was applied to assist in the calculation of the two greatest diameters and the volume of each lesion on both scans. Concordance correlation coefficients (CCCs) and Bland-Altman plots were used to assess the agreements between the measurements of the two repeat scans (reproducibility) and between the two repeat readings of the same scan (repeatability).

# I-ELCAP CT DATA

- Clinical or technical assessment to support a QI, CAD or radiomic tool claim
  - Clinical CT datasets

# SUMMARY

- Device Regulation
  - Devices are classified into three tiers
  - Indications for use & type of technology are equally important for deciding what validation is needed
- Software as a Medical Device
  - Software intended to be used for medical purposes without being part of a hardware medical device
  - FDA's approach to SaMD/ML is now evolving
    - Investigating risk-based framework for SaMDs
- Medical device develop tool (MDDTs)
  - Methods, materials, or measurements used to assess effectiveness, safety, or performance of a medical device
  - Potential for lung CT phantoms and datasets as MDDTs

# ACKNOWLEDGMENTS

- I'd like to acknowledge Brandon Gallas, Marios Gavrielides, Tomoe Hagio and Qin Li for providing slides on their research and regulatory work being presented in this talk
